

# Maple Minis

## Sun Care Policy

At Maple Minis, we are committed to ensuring that all babies and toddlers are fully protected from the dangers of too much sun/UV rays. Severe sunburn in childhood can lead to the development of malignant melanoma (the most dangerous type of skin cancer) in later life.

We follow guidance from the weather and use the following procedures to keep babies safe and healthy in the sun:

- Key persons will work with the parents of their key children to decide and agree on suitable precautions to protect children from burning, including those with more sensitive skin types and those that may be more tolerant to the sunshine, e.g. black and/or Asian colouring
- Children must have a clearly labelled sun hat which will be worn at all times whilst outside in sunny weather.
- Children must have their own labelled high factor sun cream with prior written consent for staff to apply. This enables children to have sun cream suitable for their own individual needs. Staff must be aware of the expiry date and discard sunscreen after this date. Sun cream will be available should any parent forget to bring their own. Sunshades for the pushchairs used in nursery are provided and babies under six months will be kept out of direct sunlight.
- Parents are requested to supply light-weight cotton clothing for their children suitable for the sun, with long sleeves and long legs.
- Children's safety and welfare in hot weather is the nursery's prime objective so staff will work closely with parents to ensure all appropriate cream and clothing is provided.
- Staff will make day-to-day decisions about the length of time spent outside depending on the strength of the sun; children will not be allowed in the direct sunlight between 11.00am – 3.00pm on hot days
- Children will always have sun cream applied before going outside in the hot weather and at frequent intervals during the day.
- Drinking water will be readily available for toddlers and babies will be offered extra drinks during hot weather.
- Shade will be provided where possible to ensure children are able to still go out in hot weather, cool down or escape the sun should they wish or need to.

### Vitamin D

Sunlight is important for the body to receive vitamin D. We need vitamin D to help the body absorb calcium and phosphate from our diet. These minerals are important for healthy bones, teeth and muscles.

Our body creates vitamin D from direct sunlight on our skin when we are outdoors. Most people can make enough vitamin D from being out in the sun daily for short periods with their hands or other body parts uncovered. Sun cream will stop the ultraviolet B (UVB) rays from reaching your skin, so part of your body should be uncovered and not have sun cream on. At nursery we find the right balance to protecting children from sunburn as well as allowing the skin to access the sun for the vitamin D benefits, e.g. hands will be left without sun cream but children will be fully monitored to ensure no hands are burnt.

The benefits will be discussed with parents and their wishes will be followed with regard to the amount of sun cream applied.
